A brief write-up about your Event (in about 300 words) :

The Olive Ridley sea turtle (*Lepidochelys olivacea*) is one of the smallest and most remarkable sea turtle species, known for its unique mass nesting behavior, also known as arribada. However, their numbers have significantly declined due to threats such as habitat destruction, illegal hunting, bycatch, and the environmental impacts of pollution. Morjim Beach in Goa serves as a key nesting site for these turtles, making it an important location for conservation efforts. This seminar, organized by the Nisarg Club in association with the Goa Forest Department, aims to raise awareness about the Olive Ridley sea turtle and its role in marine ecosystems, emphasizing the critical need for conservation. By hosting this event at Morjim Beach, we aim to provide students and volunteers with a direct connection to the issue, offering hands-on knowledge about the species and what actions can be taken to ensure its protection.
